

left and right structures are distinct classes,
so a horizontal flip inverts the $w=3$ tier

Dice scores a class 0.0 the moment one
false blob appears on an absent-class frame

Task 1 (merged, 16 classes): TopK cross-entropy on the hardest 10% of pixels, plus Tversky.

Task 2 (fine, 31 classes): cross-entropy plus Focal-Tversky, three seeds averaged before one argmax.
